

Pokémon Go for Vocabulary

LotusHack × HackHarvard 2026 · Edtech Track

"My daughter is 2½. She often grabs my phone and demands YouTube."

Every parent knows this guilt.

THE PROBLEM

3+ hours/day

Kids on passive content

8 million

Vietnamese kids learning English

$50-200/month

Parents spend on tutoring

#58 globally

Vietnam English proficiency

The spending is there. The results aren't.

What if that phone became an exploration tool?

Instead of passively scrolling, kids actively explore the world.

Under the Hood

3 AI Models · Automatic Failover · Under 5 Seconds

The Innovation

Passive → Active

Child creates their own curriculum

Gamified Learning

Pokémon Go psychology for vocabulary

Audio-First AI

No text. No menus. Ears and taps.

Google Lens identifies. SnapLearn teaches.

Identifies.

Teaches.

The Vision

📱 Now

Vocabulary camera — snap, learn, collect.

📚 Next

Sentences & stories from captured words, classroom mode, Chinese, missions.

🤖 Future

Voice companion (“Is that your cat?”), cultural discovery, 8M kids market.

A path from vocabulary to fluency and cultural connection.

SNAPLEARN

4 AI Engineers. 1 Dad. 36 Hours.

We build enterprise AI systems for hospitals.
This hackathon, we built for a tougher client —
a six-year-old who can't read.

So parents can hand over the phone and feel

proud – not **guilty**.
